### State Street Announces the Release of a Comprehensive Analytics Dashboard for Investment Professionals

20/04/2009

#### *Teacher Retirement System of Texas Leverages New Capabilities for Comprehensive Investment Analysis*

**BOSTON, April 20, 2009** – State Street Corporation (NYSE:STT), the world’s leading provider of financial services to institutional investors, announced today the release of its new State Street Investment Analytics Dashboard<sup>SM</sup> which provides customers with an interactive and graphical approach for interrogating risk, return and supporting accounting information across both public and private investments.

The enhanced Dashboard is a new capability fully integrated with the State Street Investment Analytics Data Warehouse which provides comprehensive access to monthly and daily performance returns across accounts, composites and benchmarks down to the security level. The Data Warehouse solution was announced by State Street last September. The new Investment Analytics Dashboard is a graphical user-interface into the Data Warehouse that provides drilldown capabilities and a view into the underlying components and drivers of investment results. With real time updates from the Data Warehouse, investment professionals can now get a succinct view of their investment results on a monthly or daily basis. The Dashboard is another advancement to the award-winning my.statestreet.com platform and can also be integrated into a client’s intranet portal or even white labeled for direct end-client access.

The Teacher Retirement System of Texas (TRS), a long-standing customer, partnered with State Street to help develop the Dashboard capabilities.

“State Street worked together with us to customize a solution that not only met our immediate needs, but also put in place a framework to provide enhancements quickly in order to meet future requirements,” said Jerry Albright, senior managing director at TRS.

To build the Investment Analytics Dashboard, State Street established a senior team of analytics experts with broad experience who leveraged the newest data modeling techniques in the industry.

“Our analytics team continues to focus on the next generation of information delivery capabilities and will continue to enhance the Dashboard,” said William Pryor, senior vice president and head of State Street Investment Analytics. “We worked closely with TRS as well as a small number of additional customers to understand their specific needs and gain strategic input into the development of the Dashboard. Customer reaction to this first release has been overwhelmingly positive.”

Over the next twelve months State Street will roll out the Investment Analytics Dashboard to its current performance and analytics customers globally through [my.statestreet.com](http://my.statestreet.com). The Dashboard is the first iteration of executive-level dashboards across different products and services that will become available on [my.statestreet.com](http://my.statestreet.com) in the coming months.

State Street Corporation (NYSE: STT) is the world's leading provider of financial services to institutional investors including investment servicing, investment management and investment research and trading. With \$12 trillion in assets under custody and \$1.4 trillion in assets under management at December 31, 2008, State Street operates in 27 countries and more than 100 geographic markets worldwide.
